1 Introduction

WebCruiser Web Vulnerability Scanner for iOS (iPhone, iPad), an effective and convenient web penetration testing tool that will aid you in auditing your website!

WebCruiser can find the following web vulnerabilities currently:

- * GET SQL Injection(Int, String, Search)
- * POST SQL Injection(Int, String, Search)
- * Cross Site Scripting(XSS)

Requirement: Jailbroken iOS 5.0 or later, iPhone & iPad

2 Download and installation

The price of WebCruiser Web Vulnerability Scanner for iOS is \$9.99. You can find it by search "WebCruiser" in the Cydia application.

3 Usage

3.1 launch

Touch the "WebCruiser" application icon to launch it.

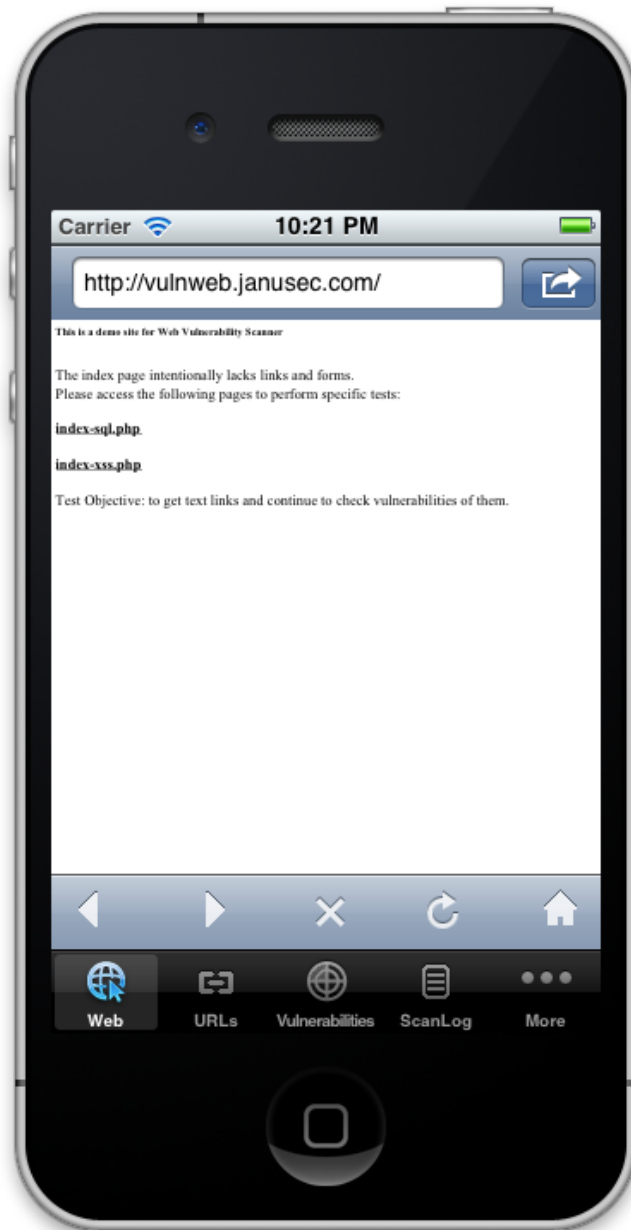

3.2 Web Navigation

Input the site URL which you prepare to scan and press "Go", for example <http://vulnweb.janusec.com/>

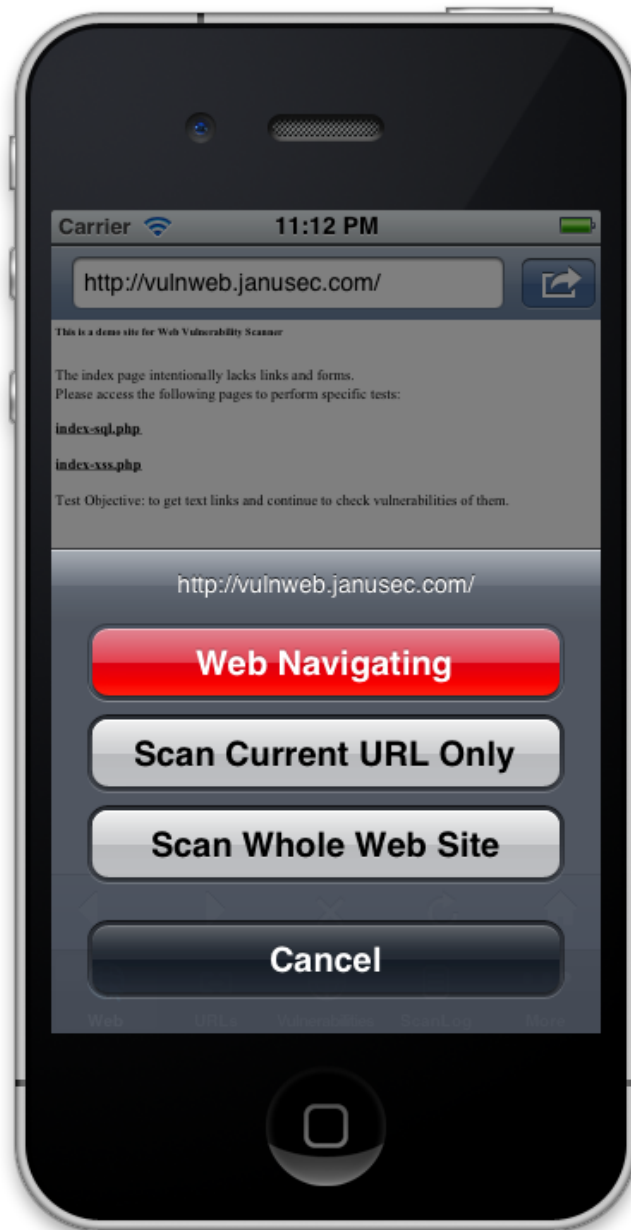

This is a demo site which include vulnerabilities such as SQL Injection, Cross Site Scripting(XSS) etc.

In some cases, you need sign in the website to get the permission to scan it.

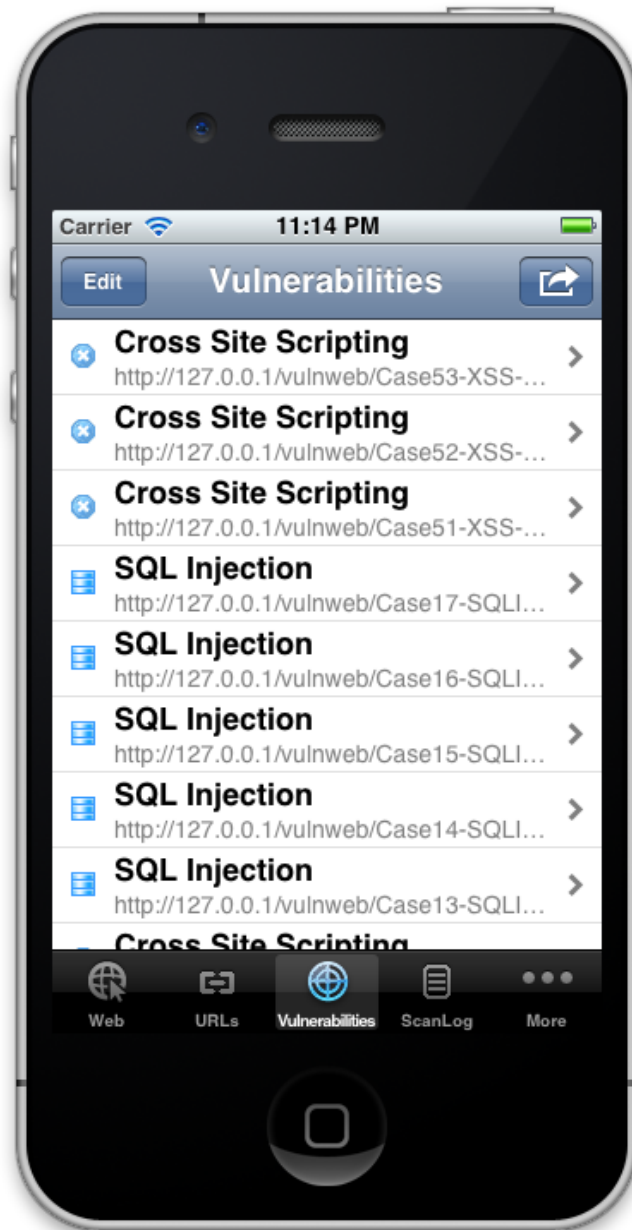

3.3 Scan

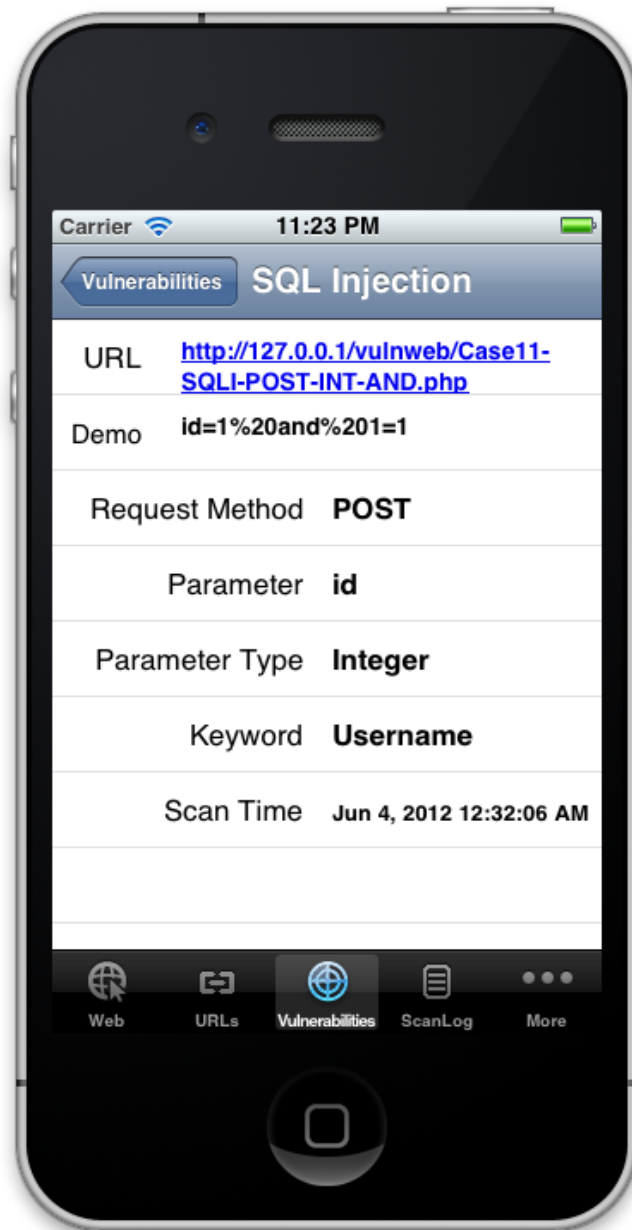

Touch the right "Action" button, you can select "Scan Current URL Only" or "Scan Whole Web Site".

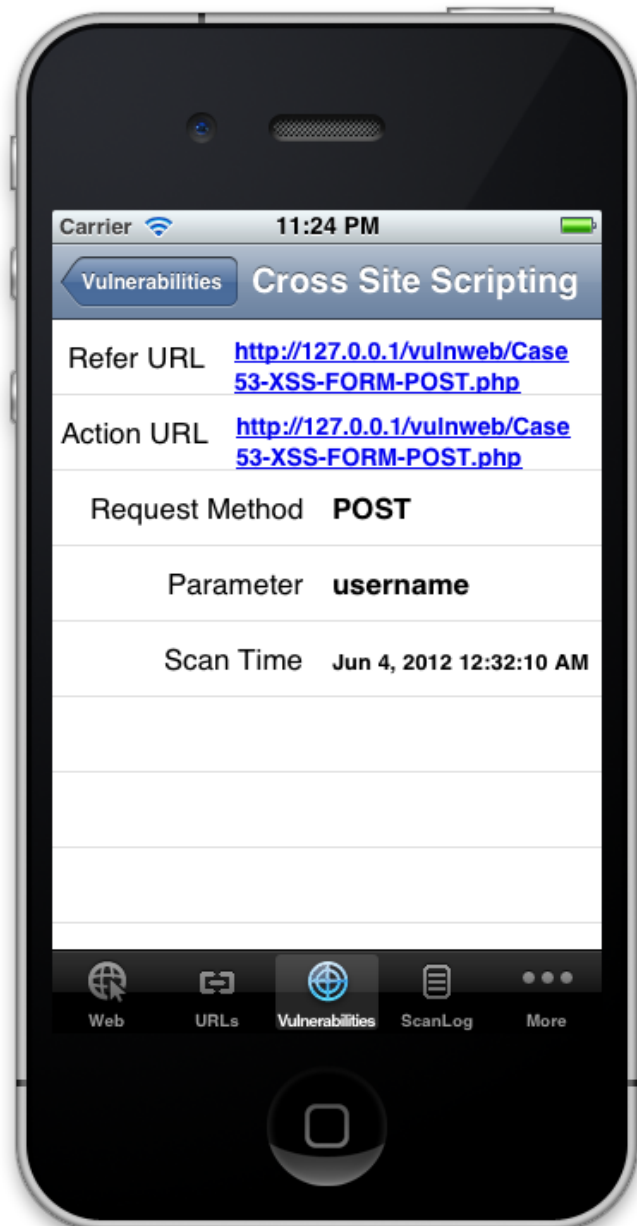

Then WebCruiser begin to scan the URL or site, the result will be displayed in the "Vulnerability" tabpage.

The "SQL Injection" vulnerability maybe like this:

and the “Cross Site Scripting” vulnerability maybe like this:

Carrier 11:24 PM

Vulnerabilities Cross Site Scripting

Refer URL <http://127.0.0.1/vulnweb/Case53-XSS-FORM-POST.php>

Action URL <http://127.0.0.1/vulnweb/Case53-XSS-FORM-POST.php>

Request Method **POST**

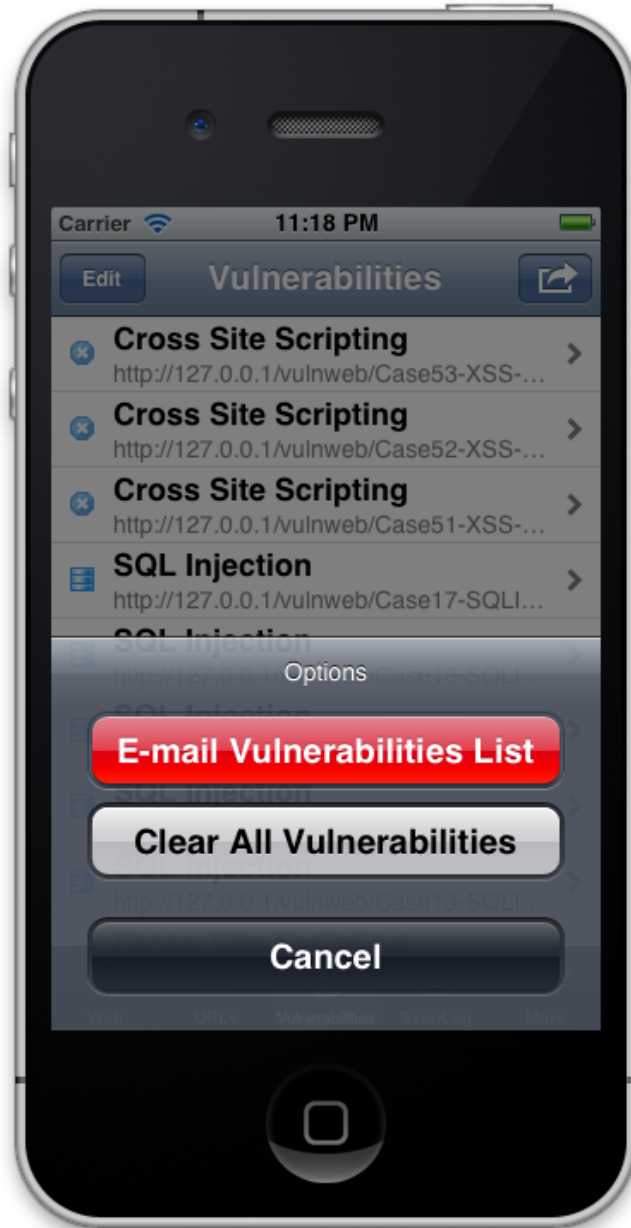

Parameter **username**

Scan Time Jun 4, 2012 12:32:10 AM

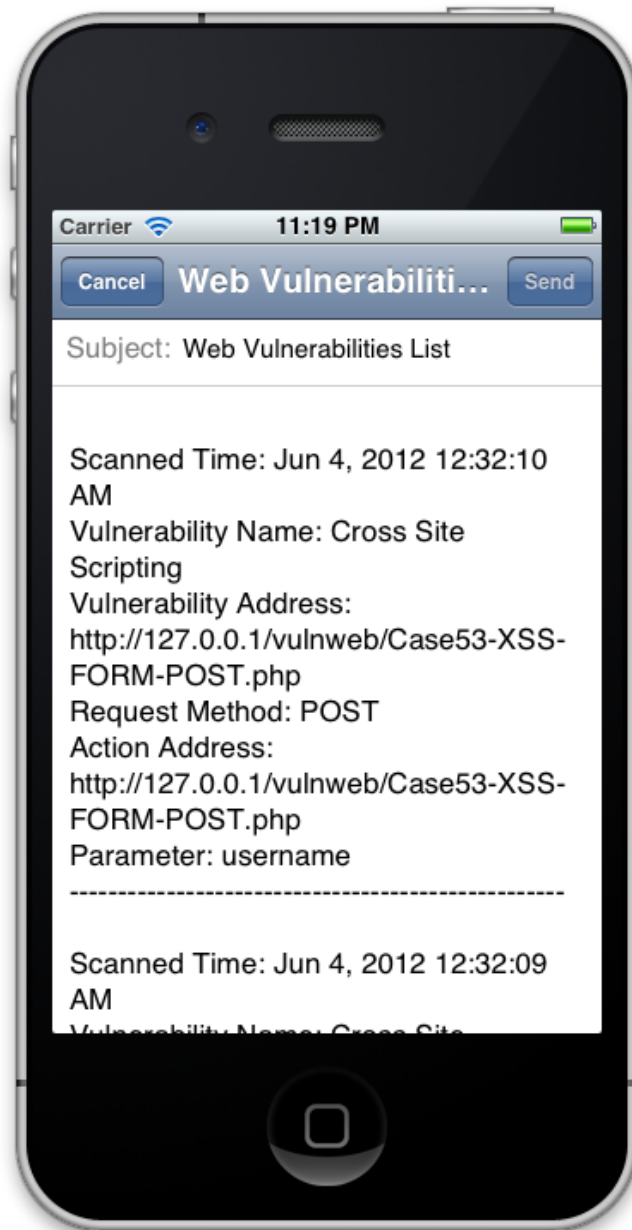

- Web
- URLs
- Vulnerabilities
- ScanLog
- More
